This document provides you with key investor information about this fund. It is not marketing material. The information is required by law to help you understand the nature and the risks of investing in this fund. You are advised to read it so you can make an informed decision about whether to invest.

**Objectives and Investment Policy**

**Investment objective:**
The investment objective of Natixis International Funds (Dublin) I – Loomis Sayles Global Opportunistic Bond Fund (the “Fund”) is to achieve high returns through capital growth and income.

**Investment policy:**
The Fund invests primarily in global securities that are intended to provide fixed periodic interest payments and the eventual return of the principal at a future date (“Fixed Income Securities”), selected on an opportunistic basis.

The Fund invests at least two-thirds of its total assets in global investment grade Fixed Income Securities (securities rated at least BBB- by Standard & Poor’s Ratings or an equivalent rating by another agency or, if unrated, determined by the Investment Manager to be comparable) and in global currencies including currency exchange transactions for hedging and efficient portfolio management purposes. The Fund may invest in Fixed Income Securities issued by companies, issuers or guarantors by sovereign governments or public international bodies, zero coupon securities (securities that make no periodic interest payments and are sold at a discount from their face value), Regulation S Securities (securities initially offered only outside the US and to non US persons. The initial offering is exempt from US securities laws), Rule 144A securities (US private offered securities) and securities whose value and income payments are derived from and secured against a specified pool of assets or mortgages through a securitization process. The Fund may invest in fixed income securities that may be denominated in any currency and may be issued by issuers located in countries with emerging securities markets. The Fund may invest in fixed-income securities of any maturity (the date on which return of the principal is due and period interest payments stop).

The Fund may invest up to one-third of its total assets in short term highly liquid securities, bank deposits or securities other than those described above such as hybrid bonds (debt securities combining the regular interest payments of bonds with certain equity features), commercial paper (short term unsecured debt instrument), collateralized mortgage obligations (debt instruments using a pool of mortgage loans as collateral), convertible securities in accordance with the UCITS Regulations and other specific U.S. securities. The Fund may invest up to 20% of its total assets in securities of below investment grade quality. The Fund may invest up to 25% of its total assets in convertible bonds and up to 10% of its total assets in equities, other equity-type securities, warrants and depositary receipts for any of those equity securities.

The Fund is actively managed and uses an opportunistic strategy in selecting securities.

The Fund may use derivatives for hedging and/or investment purposes.

**Risk and Reward Profile**

**Typically Lower Rewards**

**Typically Higher Rewards**

This ranking on the synthetic risk and reward indicator scale is due to the Fund’s allocation to fixed income markets. Historical data may not be a reliable indication for the future. The risk category shown is not guaranteed and may shift over time. There is no capital guarantee or protection on the value of the Fund. The lowest category does not mean “risk free”.

The following risks are materially relevant to the Fund but are not adequately captured by the synthetic indicator:

**Derivatives/Counterparty risk:** The Fund may enter into listed and unlisted derivative contracts in order to have an exposure to underlying assets or to protect its direct assets. Payments on these contracts vary with changes of the value of the underlying assets. These contracts may cause the Fund to have a higher market exposure than it would have otherwise, which may in some cases increase losses. Unlisted contracts are agreed with a specific counterparty. If the counterparty goes into liquidation or fails or defaults on the contract, the Fund could suffer a loss. Because they are not listed, these contracts can be difficult to price.

**Changing Interest rate risk:** The value of fixed income securities held by a fund will rise or fall inversely with changes in interest rates. When interest rates decline, the market value of fixed income securities tends to increase. Interest rates typically vary from one country to the next for reasons including rapid fluctuations of a country’s money supply, changes in demand by businesses and consumers to borrow money, and actual or anticipated changes in the rate of inflation.

**Credit risk:** Funds investing in debt securities issued by a corporate, bank or sovereign organization are exposed to the possibility that this issuer will not be able to reimburse debt holders (principal and interest payment). In addition, if after acquisition the perceived risk of failure increases, the value of such securities is likely to decrease.

**Structured Instrument risk (including securitizations):** Funds investing in structured instruments (securities linked to the performance of underlying assets, foreign currencies, indices of securities, interest rates, or other financial indicators) may wish to be exposed to an underlying asset or to secure their direct assets. Payments on such structured instruments may vary with changes of the value of the underlying assets. Funds investing in structured instruments issued by a corporate, bank or other organization are exposed to the possibility that this issuer will not be able to reimburse the holders. In addition, these instruments can involve significant economic leverage. As a result, funds may gain a higher market exposure than they would have otherwise, which may in some cases increase losses. Finally, funds may not be able to sell structured instruments quickly and easily. Structurizations result from complex financial configurations that may contain both legal and specific risks pertaining to the characteristics of the underlying assets.

Please refer to the section entitled “More Information About Risk Considerations” in the Prospectus for additional details on risks.
The charges you pay are used to pay the costs of running the Fund, including the costs of marketing and distributing it. These charges reduce the potential growth of your investment.

Charges by Share Class - Share Class R

One-Off charges taken before or after you invest
Entry Charge 3.00%
Exit Charge 2.00% *
This is the maximum that might be taken out of your money before it is invested or before proceeds of your investments are paid out.

Charges taken from the Fund over a year
Ongoing Charges: 1.50% p.a.
Total Expense Ratio (TER)

Charges taken from the Fund under certain specific conditions
Performance Fee: None

Past Performance

Past performance is not a reliable indicator of future performance.
This bar chart shows the performance of the R/D(USD) Share Class in its currency of quotation, net of ongoing charges and excluding entry or exit charges, and the performance of the Bloomberg Barclays Global Aggregate Index.
Date of creation of the Fund: 25 August 2000.

* A levy of up to 2.00% may be applied to an investor engaging in excessive trading or market timing practices. A switching charge equal to the difference in the sale charges of the share classes may apply if the share class or fund into which you switch has a higher sales charge.

The entry and exit charges shown are maximum figures. In some cases you might pay less – you can find this out from your financial adviser.

For more information about charges, please refer to chapters “Fees and Expenses” and “Valuation, Subscription and Redemption” of the Fund’s prospectus, which is available at www.im.natixis.com/intl.
